Call a space from a video system

1. Connect

Type the video address and call

All video systems are different. Here we use a keypad. Other systems have a remote control instead, or the video screen works as a touchscreen.

2. Communicate

1-4 active speakers are shown in large panes

A blue line shows who is speaking

A number of additional participants are displayed in small panes

Use the keypad or remote control to change layouts, mute yourself or others, lock/unlock your space or end the call.

Key sequences must be set up by your admin.
